Full Stack Developer*

Product Goals

- Social media platform for artists
 - Musicians, vocalists, visual artists, poets, etc.
- Designed to help artists collaborate, grow a following, and monetize their work in a dedicated space
- Addresses the lack of a platform specifically for artists
 - Artists currently compete with influencers on platforms like Instagram, TikTok, and YouTube
 - Allows artists to focus all social media interactions in one place
 - Provides a space for users to discover new artists and find inspiration
- Offers a centralized platform for both artists and fans, separating artistic content from non-artistic content

Product Scope

- The Home Page/Feed will display recommended posts based on the user's following and an option to see posts for accounts the user are following on their Home Page/Feed
- The Discovery/Trending page will display SoundPalette's most popular posts based on number of likes and views
- Users can post text, images and audio/sound clips accounts or posts
- Users can interact through like, comment, follow and subscribe (\$) to other accounts
- Users can search tags (profile and posts)
- Users will have the ability to post exclusive content only for followers who have paid to subscribe
- Users can collaborate through direct messages (individual and group)

Sprint Timeline

Risk and Contingency

Sprint Delays

Sprint 4 and 6 have been reserved as buffers in case of any delays in previous Sprints.

Feature Contingency

By the end of Sprint 4, we hope to have all the core features to be completed. These features include: Homepage, Discovery page, Profile creation/edit, Posts, Tags, Social Interactions (likes, comments, follows).

If there is a delay, we will reserve the Events feature as a contingency and reallocate the team members to complete core features.

Next Steps

- Familiarize yourselves with Android Studio.
 - Documentation and tutorials have been added to the GitHub
- Kaija will complete and submit the Release Planning Report due Sunday
- Will is working towards setting up API server
- Next meeting is Monday where we will complete all technical and UI designs.
 - May need to have a second meeting next week if we cannot complete a foundation on Monday
- The goal for Sprint 1 is to have everything set up so we can move towards working on our individual responsibilities

Sprint 2 Overview

Team Member	Responsibility
Parth Chauhan	Login Page
Victoria Danh	Profile Creation
Prab Khokhar	Homepage
Kaija Sproxton	Discovery Page
James Windjack	Functionality for Posting Text
William White	API Server/Database
